

Fabio Milazzo — Curriculum Vitae

✱ 12/12/2002 (Milan, Italy) • 📞 +39 348 6930022

✉ fabio@milazzo.it ✉ f.p.milazzo@student.tudelft.nl • in Fabio Milazzo

I am an ambitious and dynamic individual with a passion for engineering, driven by curiosity in both my work and my love for engaging in different settings. Social and proactive, I am always happy to engage in casual conversations. I work well in teams, where I am always ready to assume whichever role allows me to make the best possible contribution.

Within the Precision and Microsystems Engineering department at TU Delft, my studies have focused on precision mechanisms design and dynamics - fields that truly fascinate me.

Education

- **Delft University of Technology** **Delft, Netherlands**
Master's Degree in Mechanical Engineering, High-Tech track. 2024 - Ongoing
- **Politecnico di Milano** **Milano, Italy**
Bachelor's Degree in Mechanical Engineering, Graduated with 109/110 2021 - 2024
- **IIS Severi-Correnti** **Milano, Italy**
Math and Science academy, High school diploma 2016 - 2021

Experience

- **Harvard School of Engineering and Applied Sciences** **Cambridge, MA**
Research Fellow February 2026 - Ongoing
Member of the Bertoldi Group (bertoldi.seas.harvard.edu), responsible for the development of an underactuated robotic platform. Research verts on the embedding of intelligence to compliant mechanisms, to enable scalable autonomous locomotion.

Notable Projects.....

- **Master's thesis project (ongoing)** *'Design, fabrication and deployment of a Compliant Hexapod'*
Design of a Mechanically Intelligent, Single actuator Compliant Hexapod. As part of my MSc thesis at Harvard's School of Engineering and Applied Sciences, I joined the Bertoldi Group. Here I am developing an Autonomous Compliant Hexapod, capable of obstacle avoidance through electronics-free sensing. I am responsible for the end-to-end design process, from concept definition and mechanical design to fabrication, experimental validation, and deployment. Thanks to its single-actuator design and monolithic body, the robot is controller-free and scalable, paving the way for applications ranging from space exploration to search-and-rescue operations in confined spaces.
- **Compliant Mechanisms project** *'Jumping robot'*
This 5 months project consists in the conceptualization, design, fabrication and testing of a novel compliant jumping robot. The project involved mechanism synthesis, compliant design choices, and theoretical modeling to optimize the robot's motions and abilities.
- **Bachelor's Graduation project:** *'Design of a mechanical press'*
This multidisciplinary project involved the conceptual design of a mechanical press driven by a double-point crank mechanism. The project included the analysis and preliminary sizing of key components, such as the kinematics, transmission, frame, cataloged components, and vibrational analysis. The results were summarized in a CAD model, with a focus on providing a clear and efficient design overview rather than strict technical drawings.

Personal skills

Technical skills.....

- **Programming Languages:** Master's level: Matlab, Python, TeX
Bachelor's level: C++.
- **Industry Software Skills:** Matlab (Advanced), Simulink
 - CAD softwares: -Dassault suite: SolidWorks, Catia
 - Autodesk suite: Inventor
 - Siemens suite: SolidEdge
 - FEA softwares: Ansys APDL
 - MS Office

Languages.....

- **Italian:** Native language
- **English:** Proficient - C2 (IELTS score 8.5/9)

Others.....

- **Driving license:** A2, B

Interests and extra-curricular activities

- I believe that stimulating experiences are key to broadening one's perspective. Outside of my studies, I seek out such experiences through travelling with friends, family and colleagues.
- I practice Ice Hockey, not only for my love of the sport, but also for the learning opportunities that being part of a local sport team offers. I find that sports are a great way to expand one's circle and meet new, interesting people.
